## JiuJutsu Training Kinect Application

Proposed By: El-Hassan Bilal Makled

Application Number: 13-8448

Proposed To: Assoc. Prof. Georg Jung

add some examples or nearly gestine

Motion and gesture input programs are spreading in software development during the past few years. This project will use Microsoft Kinect to focus on creating an application that will take a group of gestures and moves, using JiuJutsu moves in the application, and compares them to a library of moves that are used as reference to measure the differences between the captured move and the refrence move. The project will also focus or measuring the impact of certain striking moves in different methods either by sound or by a sensor equiped thaipad depending on the situation of the practice session being 1.1 Tasks

1.1 Tasks

1.1 Tasks

- Creating the libarate for the moves to be used as a reference. The measurement of the moves to be used moves captured.

- Measuring and calculating the delta between the two moves, reference and captured move or previous user moves.
